

UnicornHRO- Geneva Plus

JK Technosoft's Role

JKT's role includes providing expertise in development, analysis and design for their Geneva Plus application which was delivered as Hosted as well as non-hosted models. Technical support, Custom reports as well as application support with new developments for their current projects. The Study of new designs, implementation of new customer and also getting data ported from their old systems to Geneva Plus.

About the Company

Since 1982, UnicornHRO has specialized in fully integrated benefits, payroll and human resources solutions for all industries including healthcare, manufacturing, banking, educational, high technology and financial services. UnicornHRO was formally known as Software Plus.

Application Details

JK Technosoft played a key role in moving the application to a new extent. The team was given a key task of moving existing application from the Licensed Product to popular ASP (Application Service Provider) model taken out by PSC. Below are the applications developed by JKT:

Geneva Plus: It provides a comprehensive integrated payroll and HR information system that companies can either install on their own network or choose to access via the Internet from UnicornHRO.

Hosted GenevaPlus Application Service Provider: Through the use of UnicornHRO's ASP, users can access the full functionality of GenevaPlus via the Internet and without the need to devote valuable resources to the installation and upkeep of hardware and software.

iSeries HR, Payroll & Financial Solutions: UnicornHRO offers a suite of iSeries applications that streamline and increase the productivity of human resource, payroll and financial system applications.

Key Features

- UnicornHRO's ASP runs on a high-performance server
- Using an ordinary PC user can process payroll, update employee records, run reports etc via Internet.
- It allows managers to review employee-specific data
- It's highly customizable & flexible
- The Internet confidentiality is protected through a series of IDs, passwords and firewalls
- All employee information is coordinated into an integrated "employee view" that is easily accessible.
- Users can perform queries pertaining to the complete chronological history of each worker's employment.
- It streamlines workflow by integrating with numerous external systems and generating custom reports.
- It has the ability to seamlessly flow financial data directly into General Ledger systems
- It flexibly responds to last-minute changes.

Business Benefits

- Client was able to get the things done with a short notice and could address the issues for technical support.
